### Courses

**Introduction to Robotics**, *University of Southern California*.

Instructor

In my second year at USC, I took the ambitious initiative of designing a new course from scratch, where students practice what we discuss in the lectures in a simulation environment and also with actual anthropomorphic robotic arms. We setup the lab assignments so that students have the opportunity to work in groups of four members max with a Kinova Gen2 Lightweight robotic arm.

**Computational Human-Robot Interaction**, *University of Southern California*.

This is an advanced graduate level class that contrasts decision-theoretic and learning-based paradigms of reasoning under uncertainty with studies in human-robot interaction. The course emphasizes reading and presenting research papers.
